

Scaffolding

Netspan Scaffold Debris Netting

- Netspan scaffold debris netting provides you with a tough, durable and inexpensive method of wind blown waste protection. It will assist you in providing protection to both the workforce and general public. Netspan allows the transmission of natural light and provides partial weather protection, for high levels of weather protection see Spanclad cladding. Netspan is not a safety net.

Self locking plastic quick-fix tie

- length - 28cm
- pack qty - 1,000

Spanclad Scaffold Cladding

- Spanclad cladding offers both weather protection and debris containment in one system. This top quality cladding is manufactured in a tough clear wind and rain resistant polyethylene which allows the transmission of natural light whilst the reinforced mesh offers strength and durability. It is highly recommended for use on buildings where face work is being undertaken due to the high levels of weather protection Spanclad provides.

GRADE	SC225
